

BRIAN OOI TEIK SHENG

Bachelor of Computer Engineering

FRESH GRADUATE

CAREER OBJECTIVE

Computer engineering student at UTeM (CGPA 3.95), with top scores across coursework in embedded systems, AI, and software engineering. I've applied that academic foundation to hands-on projects — including a RAG-based chatbot, a fine-tuned Llama 2 model, and an IoT ultrasonic measurement system — turning theory into working, functional builds. Proficient in Python, Node.js, Express.js, and Wireshark, and seeking an AI research or software development role where I can bring that same rigor to solving real-world problems.

SKILLS

CSS	HTML
Javascript	Node.js
Java	Python
React.js	C++
Express.js	Machine Learning
	Lora Adapter

LANGUAGE

Native Chinese
Advanced English
Advanced Malay

ABOUT ME

Male

CGPA 3.94

skills: teamwork, communication skills, willing to learn, leadership, problem solving, critical thinking

EDUCATION

SJKC Sin Min, Alor Setar

2008-2014

SMJK Keat Hwa, Kuala Kedah

2015-2019

Universiti Teknikal Malaysia Melaka, Ayer Keroh

Oct 2022-present

WORKING EXPERIENCE

Test Engineer in NationGate Shn Bhd

- Testing the fraud on electronic board
- Debugging the failure
- Helping in production line to test the quality of product

COMPUTER SKILLS

- **Backend** state handling for applications
- **RAG** development on Applications
- **Supervised Learning** and **Unsupervised Learning**
- **FullStack** integrations with MERN or Vite
- **Embedding STM32** on sensor detection
- **Fine-tuning** AL model using Lora Adapter

PROJECT EXPERIENCE

1. Fine-Tuning AI Model

- Fine-tuned a **Llama 2** on kaggle dataset for **creative writing generations**.
- Used **Python**, **TensorFlow/PyTorch**, **unsloth** and **Hugging Face Transformers** to train and optimize the model.

2. Text-Based Game Using RESTful API

- Developed a **turn-based/text-based game** with backend **Node.js** and **Express.js**
- Designed and implemented RESTful API endpoints for **game logic**, **player actions**, and **state management**.

3. Water Quality Monitoring System

- Used sensors to collect data through STM32 and ESP8266 and ThingSpeak for real-time IoT visualization.

- Using **Express.js** and **React.js** to design a dashboard for visualization
- **monitoring water quality** and **triggering alert using telegram bot**

4. VectorRAG and GraghRAG on voice agent

- **Comparison between RAG architectures** and benchmarking on voice agent
